

CLEANING PROCEDURE

DYCEM® LITE MATS

For optimum performance, clean Dycem daily. Remove loose debris and ensure the floor is clean and dry before cleaning the mat.

Using a damp flat microfiber mop or pre-moistened pad, clean the exposed floor beneath the mat with slow, straight passes. Allow the floor to dry.

Fold the mat back halfway and clean the underside with a damp flat mop or pre-moistened pad. Allow both surfaces to dry.

Return the mat to its original position, ensuring it lies flat. Apply Dycem-approved cleaning agent to the mop or use a spray bottle to cover the surface.

Using a flat mop, clean the mat with smooth, overlapping passes, working away from the controlled area.

Replace the cleaning pad when required and dispose of it according to site procedures. Ensure the mat is clean and dry before resuming traffic.

Tips & Advice

- Clean Dycem according to your facility's SOP.
- Use approved, low-residue cleaners suitable for critical environments.
- Use pre-saturated flat mop pads to prevent over-wetting.
- Avoid excess liquid near airflow and raised-floor systems.
- For spot cleaning, use a 70/30 isopropyl alcohol wipe or the supplied PVA sponge.
- Clean beneath loose-laid mats at least weekly and ensure the area is dry before replacing.
- Do not use bleach, abrasive products, stiff brushes, buffing, or polishing equipment. These may damage the surface and shorten the life of the Dycem.
